EAGLE EYE NETWORKS | DIVIDIA

EAGLE EYE CLOUD VMS

See what you've been missing with AI-backed cloud video surveillance.

Eagle Eye Cloud VMS delivers modern, user-friendly video surveillance on the world's most flexible, open platform. Easily view and search live or recorded security video, remotely manage cameras from any device, and apply AI to video for actionable business insights.

AI-powered search tools and analytics can quickly identify people and objects, alert you to key events, and reduce false alarms. As a global leader in video surveillance, Eagle Eye Networks delivers industry-leading security, operations, customer experience, and safety for businesses around the world.

Eagle Eye Camera Direct

Flexibility and scalability set Eagle Eye apart.

Eagle Eye Cloud VMS integrates with hundreds of security partners so customers can easily add its industry-leading feature set to their current security portfolio. It works with more than 6,500 industry-standard cameras so you don't have to rip and replace existing infrastructure.

As a true cloud solution, VMS software and security updates happen automatically so you always have the latest version. You can easily add cameras or adjust retention time on the fly to meet your business needs. And no matter how many cameras or locations you have, you can view them all from one screen on your computer or mobile phone.

Connect existing cameras or easily add cameras from hundreds of makers.

Adjust video retention and resolution with the click of a button.

Choose storage options that suit your specific environment.

Add features with the virtual flip of a switch.

The Eagle Eye difference:
Why businesses choose Cloud VMS

Instant Remote Access

See every camera or location at any time from your computer, phone, or tablet. You can view live video, search all footage, adjust camera settings, securely download videos, and more.

Innovation and Partnerships

From access control to point-of-sale, Eagle Eye's open RESTful API is designed for unlimited customization and secure integrations with other mission-critical business applications. A vast network of technology partners unlocks new capabilities every day, for applications including:

• Building access control
• Construction monitoring
• Gun detection
• License plate recognition
• Point-of-sale auditing
• Flexible multi-camera display
• Smart parking
• Smart sensors
• 2-Way Audio

Cybersecurity

Eagle Eye Networks has completed SOC 2 Type 2 compliance — the gold standard in independent security audit. Your data and networks are protected at all times, with:

• Secure video encryption
• Constant monitoring against potential cyber threats
• No vulnerable open ports or on-site firewalls
• Automatic software updates
• Triple redundant storage at purpose-built data centers
• Two-factor authentication
