Eagle Eye Cloud VMS Highlights

OUR CLOUD PLATFORM

True Cloud VMS

Eagle Eye Networks' true cloud system's architecture makes maximum use of modern cloud computing technology, through a "pay only for what you use" subscription model.

On-premise solutions

The Eagle Eye Networks CMVR is great for customers who are not ready to move to a true-cloud solution. This local storage device comes with all of the features and benefits of the Eagle Eye Cloud VMS while still allowing you to store your footage on-premise.

CAMERA COMPATIBILITY

Use existing cameras

The Eagle Eye Cloud VMS supports 7,000+ models from hundreds of camera manufacturers. Maximize your investment by utilizing your existing hardware.

KEY OPERATIONAL BENEFITS

Simplified installation and management

Centralize your video surveillance across all sites. Our solution is 100% cloud-based and plug and play. Adding cameras is as simple as a few clicks, and the system can be configured entirely remotely.

Reduced IT burden

Eliminate recorders, local storage, and complex maintenance. Updates are automatically performed on our Bridge, ensuring that the system stays fully up to date with the latest features.

Scalability and flexibility

Increasing storage capacity for your customers is as simple as the click of a button and can be done entirely remotely. Choose the retention plan based on your customer's needs without any storage limitations.

Access footage from anywhere

Access video, view live footage and playback, utilize AI Smart Search, and manage your footage from any device.

AI AND ADVANCED FEATURES

AI Smart Search

Instantly find footage based on keyword search (ex. "Man in red hoodie with blue hat", "white honda sedan", etc.).

License Plate Recognition (LPR) with existing cameras

Add accurate LPR to your existing cameras, turning any camera into a powerful license plate reader.

Solutions for any environment

Our cabinet systems operate in areas with no power or internet connection, perfect for monitoring remote sites or areas with limited bandwidth.

911 Camera Sharing

Securely share live video feeds in real-time with first responders during an emergency.

Expanded integrations

Seamlessly integrate video with your other systems & tools such as access control, point-of-sale systems, weapons and gun-shot detection, and many more.

Real-time alerts

Customizable alerts for motion, intrusion, tampering, loitering, and many others.

CYBERSECURITY ADVANTAGES

Enhanced protection

Advanced cloud-based video management systems do not have the cybersecurity vulnerabilities that traditional systems do. Video is end-to-end encrypted to prevent unauthorized access to your footage. There are no open ports, no firewall installations are required, and security patches are applied automatically.

Easy security updates

Remotely apply security patches directly to the local device via the cloud. No manual updates or downloads required.

Compliance

The Eagle Eye Cloud VMS is NDAA compliant, SOC II certified, and ISO compliant
